

Owner: Kronospan ApS  
No.: MD-21022-EN  
Issued: 21-06-2021  
Valid to: 21-06-2026

---

3<sup>rd</sup> PARTY VERIFIED

**EPD**

---

VERIFIED ENVIRONMENTAL PRODUCT DECLARATION | ISO 14025 & EN 15804

**Owner of declaration**

Kronospan ApS  
Fabriksvej 2, 8550 Pindstrup  
VAT no. 11766110

**Issued:**  
21-06-2021

**Valid to:**  
21-06-2026

**Programme operator**

Danish Technological Institute  
www.dti.dk

**Basis of calculation**

This EPD is developed in accordance with the European standards EN 15804+A1.

**Programme**

EPD Danmark  
www.epddanmark.dk

**Comparability**

EPDs of construction products may not be comparable if they do not comply with the requirements in EN 15804. EPD data may not be comparable if the datasets used are not developed in accordance with EN 15804 and if the background systems are not based on the same database.

**Validity**

This EPD has been verified in accordance with ISO 14025 and is valid for 5 years from the date of issue.

**Declared products**

Spaandex particle boards, type P1 8-40 mm, P2 8-40 mm, P4 25 mm and P6 22 mm

**Use**

The intended use of an EPD is to communicate scientifically based environmental information for construction products, for the purpose of assessing the environmental performance of buildings.

**Production site**

Kronospan ApS in Pindstrup, Denmark

**EPD type**

- Cradle-to-gate
- Cradle-to-gate with options
- Cradle-to-grave

**Products use**

Particle boards P1 and P2 are for different interior uses. P4 is particle boards for construction - mainly heated floors, whereas P6 particle boards are primarily for ordinary floors and secondly for heated floors.

CEN standard EN 15804 serves as the core PCR
Independent verification of the declaration and data, according to EN ISO 14025
<input type="checkbox"/> internal <input checked="" type="checkbox"/> external
Third party verifier:
 <hr/> <i>David Althoff Palm, Ramboll</i>

**Declared unit**

1 kg Spaandex particle boards in various dimensions.

Results can be recalculated into m<sup>2</sup> by using information about the specific thickness and density of the products.

# Product information

## Product description

The main product components are shown in the table below.

Material	Weight-% of declared product
Wood	82-86
Glue	6-10
Water	6-8
Urea	<1%
Hardener	<0.5
Paraffin emulsion	<0.5

The wood is primarily from recycled sources.

## Representativity

This declaration, including data collection and the modeled foreground system and results, represents the specified products from a single Kronospan ApS production site in Denmark. One distribution scenario in Denmark and one in Sweden is included. The end-of-life represents disposal by incineration in these countries. Background data are based on GaBi ts database content version 2021.1 and are less than 10 years old. Generally, the used background datasets are of high quality, and the majority of the datasets are only a couple of years old.

## Dangerous substances

The particle boards do not contain substances listed in the "Candidate List of Substances of Very High Concern for authorisation"

(<http://echa.europa.eu/candidate-list-table>)

## Essential characteristics (CE)

The products are covered by the standard EN 1991-1-1:2007.

## Reference Service Life (RSL)

No RSL is declared. This EPD is based on a cradle-to-gate with options assessment and does not include the use stage.

# LCA background

## Declared unit

The LCI and LCIA results in this EPD relates to one kilogram of recycled particle boards of varying dimensions.

Name	Value	Unit
Declared unit	1	kg
Density	550-750	kg/m <sup>3</sup>

## PCR

This EPD is developed according to the core rules for the product category of construction products in EN 15804 and where relevant the PCR EN16485.

## Flow diagram

## System boundaries

This EPD is based on a cradle-to-gate with options LCA.

The general rules for the exclusion of inputs and outputs follows the requirements in EN 15804, 6.3.5, where the total of neglected input flows per module shall be a maximum of 5 % of energy usage and mass and 1 % of energy usage and mass for unit processes. In practice, only very minor materials or energy that are far below 1% was excluded.

### Product stage (A1-A3) includes:

- A1 – Extraction and processing of raw materials
- A2 – Transport to the production site
- A3 – Manufacturing processes

The product stage comprises acquisition of wood primarily from post-consumer and to some extent pré-consumer wood. Post-consumer wood comes from recycling centrals and similar. The pré-consumer wood comes from production sites, such as for example furniture producers who cannot use the wood themselves. Smaller inputs of primary wood from forests and residual wood from saw mills is also used. The product stage also comprises acquisition of other raw materials and energy, transport to the production site, packaging and waste processing up to the "end-of-waste"

state or final disposal. The LCA results are declared in aggregated form for the product stage, which means, that the sub-modules A1, A2 and A3 are declared as one module A1-A3.

Production processes in Denmark includes cleaning of the wood, chipping, sieving, milling, mixing, drying, glueing, pressing and packing. Data for production was collected for the year 2020.

**Construction process stage (A4-A5) includes:**

A4 – Transport to the building site, where two distribution scenarios are included – one applicable for Denmark and the other is applicable for Sweden:

Construction wood transport to building site			
Type of transport and payload capacity	Capacity utilized incl. return (%)	Distance (km)	Diesel consumption (l/tonkm)
Truck (25t)	61	200 (DK) 1000 (SE)	2.2E-2

A5 – Module A5 is not included, but packaging materials are disposed of in this module. Different packaging solutions can be used and the applied average includes 12 gram joists, 1 gram cardboard and 0.58 gram plastic material.

**End of life stage (C1-C4) includes:**

C2-C3 – Transportation and waste processing:

The end-of-life route scenarios in Denmark and in Sweden are both by 100% collection with mixed construction waste for incineration of the products with energy recovery. In practice, it is known that a part of the products are recycled, but the exact ratio is not known. Transport from building site to incineration assumes a 100km transport distance. There is no disposal in C4.

**Benefits and loads beyond the system boundaries (D) includes:**

For the recovered energy during incineration in Module C, Module D includes net impacts and benefits from avoided Danish or Swedish average electricity production and thermal energy recovery.

## Additional information

### Indoor air

*The EPD does not give information on release of dangerous substances to indoor air because the horizontal standards on measurement of release of regulated dangerous substances from construction products using harmonised test methods according to the provisions of the respective technical committees for European product standards are not available.*

### Soil and water

*The EPD does not give information on release of dangerous substances to soil and water because the horizontal standards on measurement of release of regulated dangerous substances from construction products using harmonised test methods according to the provisions of the respective technical committees for European product standards are not available.*
